

Sofford.

1621.

A

New Almanacke,  
and Prognostication,  
for the yeare of our  
LORD GOD,

1621.

*Being the first from the Bissextile or Leape-yeare.*

Calculated for the Latitude  
and Meridian of the most honourable  
Cittie of London, where  
the Pole is exalted 51. grad. & 32.  
min. and may very well serue  
for most parts of Great  
Brittaine.

BY

Arthur Sofford Philomathist.

*Os hominis sublimis dedit, cœlumq; videre  
iussit, et erectos ad sidera tollere valens.*

LONDON:

Printed for the company of  
Stationers.

## Vulgar Notes.

Astronomical

# ¶ Astronomical Calculations for this present year, 1621.

**T**He true præcession of the Æquinoctiall (according to the best Astronomers of this our age) is 28 de: 32 min: 56. seconds.

The greatest obliquity of the Zodiacke, is 23. degrees, 31 min: and 30 seconds.

The eccentricity of the Sunne is 3588. parts, the totall signe being 100000.

## Of the foure Quarters of the yeare, and first of Winter.

**W**Inter, of Astronomers accounted the first quarter of the yeare, toke his beginning vpon the 11 day of December the yeare going before at 7 of the clocke and 2 min: in the morning of the same day, at which moment the Sunne entred into the first scruple of the tropicall signe Capricorne, then being in his greatest declination from the Equinoctiall towards the South, viz. 23 degrees, 31  $\frac{1}{2}$ , his meridionall height being no moze then 14 deg. 56  $\frac{1}{2}$ . This quarter by nature is  $\frac{1}{2}$  coldest in all the yeare, & the colder and drier the wholesomer: yet in a hote Region through ouernmuch cold, trees will die. Winter warme and moist is vnwholesome, and no friend to Husbandmen.

# Of the Spring.

The most comfortable Quarter of all the yeare is the Spring (at which time the earth made apt by the temperate warmth of the Sunne, byingeth forth all things for the consolation and good of man) beginning at that instant when the Sun entreth into the first scruple of the Equinoctiall signe Aries, which hapneth this yeare the 10 of March, at 7 of the clocke, 56 min: & 14 seconds in the morning.

For which time the iudicious Reader (if bulgar Astrologie be not altogether fabulous) in viewing the Figure following, calculated, may perceiue more at one sight concerning the ayres mutation, then I in many words am able to expresse.

## Of Summer.

**S**ummer beginneth when the Sunne entreth into the tropicall signe Cancer, then hauing greatest North declination that can be, viz. 23 deg. 31 min. and a halfe, and mounted to his highest altitude aboue our Horizon, that is, 61 deg. 59  $\frac{1}{2}$ ; which commeth to passe vpon the 11 day of Iune, at 11 of the clocke, and 39 minutes before none.

This Quarter of nature is hot and dry, cholerike: yet commonly in the beginning thereof some raine falleth, fructifying the earth, which may proceed from the Sunnes ioyning himselfe to certaine starres moyst of nature in the constellation of Cancer, as Prosepe, and  $\gamma$  Aselli: But as soone as he approacheth nere Syrius, and Procyon, starres of nature fiery, most vehement heat is produced. (yet somewhat mitigated by  $\gamma$  Etesian winds then commonly blowing) which scorching season wee call dog daies, of the two dogs Syrius, and Procyon, before mentioned. And lastly, coming to the barren Virgo (Arcturus then rising) a remission of heat then ensueth, with some shewes.

## Of Autumne.

**A**utumne, the last quarter Astronomicall, but  $\gamma$  third after the common accompt, by nature is cold and dry, resembling the earth, and taketh his beginning this yeare vpon the 13 day of September, at two of  $\gamma$  clocke and one minute in the morning, that is, when the Sun maketh his ingresse into the first scruple of the Equinoctiall signe Libra. This Quarter vsually beginneth reasonable warme, with temperate moisture, which may come to passe because the Sonne then passeth through Libra, of the avery triplicity.

But after  $\gamma$  Vespertine setting of  $\gamma$  Dragons tayle, that is about the 15 of October, wee are not to expect

## A Prognostication.

any more warrenesse, and therefore called of the Germanes *Dea gallen*, *Sommer*.

Now for a briefe and pithie description of these four Quarters, take these 4 verses of Ouid.

### *Metamorpho. LIB. 2.*

Verque novum stabat cinctum florente corona,  
Stabat nuda æstas, & spicea ferra gerebat:  
Stabat & Autumnus calcatis sordidus vuis,  
Et glacialis hyems canos hirsuta capillos.

---

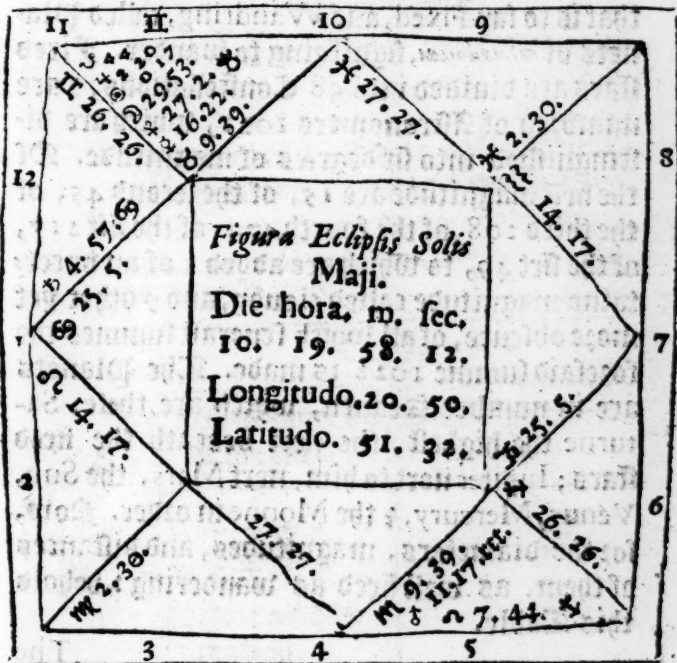

Of the great Eclipse of the Sun hapning this yeare.

The 11. of May (according to our account) but the 21. of May (according to the Roman account) at 7 of the clock 58 min. & 12 sec. in the fore noone, shall the splendent body of the Sunne be totally (within a very small and scarce sensible portion) deprived of his bright and glorious light, by the interposition of the grosse and opacuous body of the Moone between it and our sight, according to an apparant or visible conjunction. The beginning of this Phenomene or appearance will be at 6 of the clocke, 51 min. and 56 sec. And at 9 of the clocke, 10 min. and 21 sec. the Moone will be passed over, or from betwixt the sight of us and the Sunne, whereby the whole continuance of this Eclipse will be two houres 18 min. and 25. sec. his body being darkned 11. digets, and 52. min. (the whole body supposed to be divided into 12. parts, called Astronom. 12. pointes, or digets, and every such part into 60 min.) The visible latitude of the Moone at the beginning of the Eclipse will be 1 min. & 28 sec. North, descending towards the celypticke, so that the Sun shall begin to be eclipsed about the very middest of her West side, her latitude at the most of the eclipse will be 1. min. & 25. sec. and at the end 4. minutes, & 8 sec. both South and descending from the celypticke.

This Eclipse will be the greatest and most fearefull that ever was seene upon our Horizon in any living manys remembrance: And therefore the effects there-  
upon

Sofford, 1621.

Upon ensuing cannot be esteemed smal, according to  $\S$  general consent of all Astronomers (except  $\S$  Word of his infinite mercie will vouchsafe to lessen or turne them quite from vs.) Eclipsis enim solis (saith Leouitius) praesertim cum plurimum obtenebratur, non leues & tenues, sed semper atroces, funestos, & tragicos exitus afferre solent. Yet for a more particular indgement, you may examine the constitution of the Heauens at the middest of this eclipse, which will be on this sort, as is obiected vnto your view, in this following Scheme.

Of

## A Prognostication.

### Of the fixed Starres and Planets.

**T**he Starres (whether moued in their seuerall Sphaeres according to the generall opinion receined from Reuerend antiquity, or else moued as Fishes in the Sea, or Fowles in the ayre, according to Tycho Brahe and others, the best moderne obseruatozs) are of two sorts, that is to say Fixed, and Wandring, called Planets of *πλανήταις*, signifying to wander. Fixed stars are diuided into 48 Constellations, & are numbzed of Astronomers 1022, which are distinguished into six degrees of magnitude. Of the first magnitude are 15, of the second 45, of the third 208, of the fourth 474, of the fift 217, of the sixt 49, to which are added 5 of an vncertaine magnitude called cloudy, and 9 other yet more obscure, of all which seuerall summes the foresaid summe 1022 is made. The Planets are in number Seauen, which are these, Saturne the highest, the next beneath the fixed stars; Iupiter next to him, next Mars, the Sun, Venus, Mercury, & the Moone in order. Now, for the diameters, magnitudes, and distances of them, as well fixed as wandering: behold this Table.

The

## A Prognostication.

Here note that the Semidiameter of the Earth containeth 3834 English myles (according to the late ingenious mensurations of Wil-lebrordus Snellius) the circuit thereof being 24100 myles.

A Briefe Tide table shewing the times of full  
Sea in all the Principall Havens in or neere  
about England.

⌘ Phisicall Obseruations.

If thy body be filled with naughty and superfluous humors, then were it conuenient for thee to draw blood, Observing

For the { Phlegmaticke } that { Aries, or Sagitarius.  
Melancholy } the { Libra, or Aquarius.  
Cholericke } moone { Cancer, or Pisces.  
Sanguine } be in { any of the aforesaid.

Likewise you must obserue that the fittest time

For { Youth } to be let { Change to the first quarter.  
Middle age } blood { First quarter to the full.  
Elder age } is from { Full to the last quarter.  
Olde age } the { Last quarter to the change.

Yet not withstanding these and other such like cautions, if the blood-letting be for the Phrensie, the Pestilence, the Squinzy, the Plurisie, the Apoplexy, for a continuall head-ach, proceeding of choller or blood, or for any hote burning feauer, or other extreame paine; A man (I say) in such a case may not tarry a chosentime, regularly set downe by the Astronomer, or Physitian, because haply the patient might miscarry in the meane season.

Concerning

# A Prognostication.

## Concerning Medicines.

Of Medicines, some be purgative, some comfortive, and others in the meane betwixt both. Medicines purgative bee either Soluendo, or Leniendo: In the first the Moone must be in Cancer, Scorpio, or Pisces. For the other the moone must be taken when she worketh more in moistnesse, then drynesse, being in a Trine or Sextile with Mars: and you must take heed in the houre of giving the medicine least the moone have any Aspect with Saturne, for he conceales the humors making the medicine worke little. Likewise, let her be free from any Aspect of Iupiter, for he is the giver of life, the helper and comforter of the vertues: so that the medicine can but weakely expell the humors, making the body affected with an euill quality. Further in all purgative Medicines obserue the ensuing Rules.

The moone in Cancer, in Sextile, or Trine aspect of Mars	Venus not combust profiteth in euacuating Choller. Sol. auayleth in purging of phlegme. Iupiter helpeth to expell me- lancholy.	{ with E- lectua- ries.
--	--	-------------------------------

The Moone in Scorpio in Sex- tile or Trine aspect of	Venus, furthereth to purge choller, Venus not combust. Sol. auayleth to purge phlegm Iupiter, profiteth to purge Melancholy.	{ with Poti- ons.
---	--	-------------------------

The Moone in Pisces. in a Sex- tile or Trine aspect of	Venus, good to purge choller Venus not combust. Sol. auayleth to purge Phlegme. Iupiter, auayleth to purge Melancholy.	{ with Bills
---	--	-----------------

Briefe

Sofford. 1621.

Briefe Rules of Husbandry.

Sowe, set seedes, plant and graft the Moone in Taurus, Virgo, Capricorne, or Aquarius, & bind not easterly.

Sheare Sheep in the increase of the Moone.

Fell Timber for building, towards and in the last quarter of the Moone.

Fell fryth and Coppice for fexwell in the 1. quarter.

Geld & lib cattle the moone in Aries, Sagittarius, or Capricorne.

Kill fat Swine for Bacon, about full Moone.

Cut Vines in February or March.

Remooue Trees at the last quarter, betwene Hollantide, and Twelfetide.

---

Felices animæ, quibus hæc cognoscere primum,

Inq; domos superas scandere cura fuit.

Credibile est illos pariter vitijq; iocisq;

Altius humanis exeruisse Caput.

The

## A Prognostication.

### The principall Fayres of England and Wales, orderly set forth; with the Moneth, Day, and Place, where they be kept.

#### Faires in January.

**T**he thirde day Llanthibber. The twelfth day at Salisbury.
